Title: Emergency Speed Brake Control, Installation of

Origin: Verbal request by W. H. Spannuth of TWA on 1 October 1957;  
and TWA Letter No. 880-407 dated 26 November 1957.

Reason for Change: Customer requested; and revision to CCP No. 102.

Description of Change:

Page 19, Paragraph 3.4.2 DESIGN SPEEDS:

Change sixth line as follows:

From: "Design Speed (main landing gear extended) 320 K or  $M = 0.83^*$ "

To: "Design Speed (main landing gear extended) 375 K or  $M = 0.89^*$ "

Page 23, Paragraph 3.5.4.4 LANDING GEAR:

Revise paragraph to read as follows:

"The main landing gear shall be designed for extension at speeds up to 375 knots (EAS) or  $M = 0.89$  for use as drag increasing devices. The nose landing gear shall be designed for extension at speeds up to 320 knots (EAS) or  $M = 0.83$  for use as an additional drag device."

Page 32, Paragraph 3.8.1 GENERAL DESCRIPTION AND COMPONENTS:

Delete the last sentence in paragraph and substitute the following:

"The main landing gear shall be designed for extension speeds up to 375 knots (EAS), for use as drag increasing devices."

Page 32, Paragraph 3.8.1.2 CONTROLS:

Revise the paragraph to read as follows:

"The landing gear shall be operated by actuation of one control lever for all normal extension and retraction functions. A separate aft motion shall be required before the lever can be moved up or down from any position. Operating loads shall be satisfactory for actuation. The landing gear control lever shall remain in the down position at all times the landing gear is down. A solenoid lock shall

be provided to ensure that the landing gear control lever cannot be inadvertently raised from the down position while the airplane is resting on the landing gear. A manual override lever shall be provided to overcome the solenoid lock and to sound the warning horn when the override lever is moved. In the event of a failure of the normal system, release of the landing gear and door mechanisms shall be accomplished by means of a manual cable system controllable from the cockpit. This system shall be completely isolated from the normal system to prevent any single failure from rendering both systems inoperative.

The landing gear control lever shall automatically be locked in the down position as soon as the landing gear makes initial contact with the ground through ground safety switches installed on the landing gear left hand shock strut. The control lever shall remain locked in the down position until the left hand shock strut is extended, and at least three throttles are opened to a position approximately equivalent to that required to obtain the engine thrust necessary to sustain flight. An over-center spring and a cam shall preclude the possibility of the lever not reaching the full up or down position and locking. Further protection is provided by a switch which illuminates the landing gear warning light (par. 3.8.1.3) whenever the gear is down without the handle being locked mechanically in the down position. The landing gear lever shall have adequate travel to clearly indicate, to both pilots, the position of the lever.

The main landing gear can be extended as a speed brake by means of a separate main landing gear speed brake control lever in the cockpit. This lever shall be separate from the normal landing gear lever, and separate from the normal speed brake lever. It shall be impossible to raise the main landing gear by this lever whenever the main landing gear control lever is in the down position."

Effect on Weight Empty: +12.0 pounds  
Effect on Balance: +2,513 inch-pounds  
Effect on Performance: None

Title: Emergency Brake System, Revision to

Origin: Verbal request of W. J. Spannuth of TWA to B. J. Simons on 5 September 1957, and meeting in Kansas City on 20-22 November 1957 between TWA and Convair representatives.

Reason for Change: Customer requested, and revision to CCP No. 101A to show correct capacity of air bottle.

Description of Change:

Page 34, Paragraph 3.8 ALIGHTING GEAR:

Add the following new subparagraph to the page:

"3.8.2.2.1 EMERGENCY BRAKING: A separate air source, manually controlled by the pilot, shall be installed to provide emergency braking in the event of failure of the hydraulic brake system. The emergency brake system shall incorporate a 0-1000-lb direct reading pressure gage in the main air line downstream of the air brake valve. The gage line shall be provided with one gage saver. The emergency brake system shall be effective on the main landing gear wheels only."

Page 58, Paragraph 3.14.1.5 MISCELLANEOUS INSTRUMENTS:

Add the following new item to instrument list:

"One indicator, brake pneumatic pressure, 2-3/8", 0-1000 lbs."

Page 64, Paragraph 3.15.1.11 BRAKE SYSTEM:

Delete the second sentence: "(Emergency operation of the brakes shall be.....)"

Revise the last sentence in paragraph to read as follows:

"The metering valves shall be controlled by a single cable system from the brake pedals".

CONVAIR: S.D.

Hughes Tool Company  
Change No. 103

Title: "Basic T" Instrument Arrangement For The Pilot and Co-Pilot's Panel and Miscellaneous Corrections

Origin: In accordance with CAR Amendment 4B-7.

Reason for Change: To comply with CAR Amendment 4B-7.

Description of Change:

Delete present illustration Figure 3.14-1 and replace with revised attached illustration Figure 3.14-1.

Page A10, APPENDIX I-C, INSTRUMENTS AND RELATED EQUIPMENT:

Delete the seventh and eighth items in the Equipment List as follows:

"1	Computer Selector Switch	Kollsman
1	Warning Light	Convair"

NOTE: (Not to be included in Specification language.)

1. The Bendix integrated flight system sensitivity switch and pitch trim knob have been added to the instrument panel to bring it up to date.
2. The airspeed electrical warning light has been replaced by Kollsman with an electrical fail indicating flag built into the airspeed instrument.
3. The air data computer selector switch has been deleted from Appendix I-C since Convair shall supply switching "As Required" to provide satisfactory operation of the KIFIS system .
4. A guarded landing gear down lock override button has been added to the diagram for clarity as shown in the Mock-Up. The landing gear handle system is such that the gear cannot be inadvertently raised on the ground. If in flight, should a malfunction of the ground protection system occur, the manual override will allow raising of the handle to retract the gear.

Title: Integral Folding Food Trays, Installation of

Origin: TWA Mock-Up Review Comments dated 15 July 1957, and Customer Comments during Color Module Review on 9 May 1958

Reason for Change: Customer request, and revision to CCP No. 97A

Description of Change:

Page 106, Paragraph 3.19.1.1.5 PASSENGER SEATS:

Revise the fifth sentence as follows:

From: "Food tray provisions and literature pockets shall be provided on and/or adjacent to each seat".

To: "Integral folding food trays shall be installed in the main passenger compartment seat backs, excluding the last row of seats which shall receive provisions only. Four plug-in type food trays shall be provided for the front row seat passengers in the main passenger compartment. Four plug-in type food trays shall be provided as loose equipment for use behind the movable coat dividers. In addition to the integral food trays, two main passenger compartment seat rows shall include receptacles for plug-in type food trays for use behind the forward main cabin partition and the movable coat divider. All cabin seats shall contain internal provisions for the future installation of plug-in receptacles (the receptacles for these seats shall be provided with the seats as loose equipment). Literature pockets shall be installed on the main cabin forward partition, aft face of movable coat dividers and directly below food trays in the seat backs. No food trays shall be provided on the aft face of the movable coat stowages".

Page 129, Paragraph 3.23.2 EQUIPMENT INTERCHANGEABILITY:

Add under Item 2 - Interchangeability Without Alterations:

An asterisk before \*Passenger Seat Assembly

Add the following note to the bottom of the page:

"\*NOTE: The aft row of seats shall include food tray provisions only".

Page A15, APPENDIX I-C, FURNISHINGS:

Revise the 21st item in list as follows:

<u>From:</u>	"80 Passenger Trays (Stowed in Seat Pocket)	160.0 lb"
<u>To:</u>	"68 Integral Folding Food Trays (Installed on passenger seats, excluding aft row of seats)	296.0 lb
	4 Plug-in Type Food Trays (for front row seats, cabin area)	9.0 lb
	4 Plug-in Type Food Trays (for use behind coat divider, loose equipment)	(No weight empty)"

The following shall not appear in the Specification language:

See CCP No. 170, Cabin Interior Modification and 12-Place Club Area, for 12 additional plug-in type food trays to be used in the club area.

CONTAIN: SD

Hughes Tool Company  
Change No. 85

Title: Teleflex Controls in Pods and Pylons, Use of

Origin: Contractor initiated.

Reason for Change: Administrative specification change.

Description of Change:

Page 54, Paragraph 3.12.11.2 - GENERAL CONTROLS:

Delete the first sentence and add the following item to list of propulsion system controls:

"Fuel shut-off control"

Page 54, Paragraph 3.12.11.2.1 - ENGINE CONTROLS:

Change paragraph title as follows:

From: ENGINE CONTROLS

To: ENGINE POWER CONTROLS

Page 55, Paragraph 3.12.11.2.1 - Power control lever.

Delete the first two sentences from top of page and substitute the following:

"Push-pull rods and cranks from pedestal to compartment below cockpit floor, closed cable system to pylon, and push-pull cable (Teleflex type) to engine control. Provisions shall be made to prevent the power control from creeping in flight."

Effect on Weight Empty: 0  
Effect on Balance: 0  
Effect on Performance: None

## EXHIBIT "A"

In the preliminary design stage, a study of the engine controls was made by Convair Engineering Controls Design Group to evaluate push-pull rods and cranks, with cables, and teleflex cable with torque boxes. The three means of mechanical transmission are always considered as equivalent or alternate methods, each has its own peculiar set of limitations and Convair wishes to briefly cover the reasoning for selecting teleflex components in the pod and pylon areas only:

1. Weight Comparison

Indications from the design studies are that the Teleflex system will show no weight increase compared to a cable or push pull rod system when completely worked out to a satisfactory configuration

2. No Engine Heat Growth Effect

The -40°F to +350°F realistic temp. change from engine heat will not affect Teleflex components but will vary engine control input shaft location by .25+ fwd .02 outboard and .08 down. It would change geometry of cranks and rods by approximately 10% thrust equivalent. The temp. change would cause extreme rig tension variation in a cable system and maintaining proper tension would be difficult and unreliable in these areas.

3. No Engine Shaft Sideloads would be imposed with Teleflex torque box. The alternate methods would impose side loads on the engine shaft (limited to 1# max.) unless compensated for by torque tubes with flex bellow drives, U-joints or other means. These are costly and heavy and/or subject to fatigue and lost motion problems.4. Sensitive Engine Control will be possible by 0° 10' adjustments for desired cruise or increments of .31% thrust as teleflex torque box keeps geometry constant, travels constant, and mechanical advantages constant. All cockpit levers will be in exactly same position at all times. This is not possible with manufacturing variations in crank supports affecting geometry plus the loss in travel due to rise and fall as well as peaking loads at the critical end travels such as 108% thrust and 100% thrust reverse. The 125° engine shaft rotation exceeds practical limits or any rod and crank mechanism but is ideal for Teleflex.5. Quick Engine Change is accomplished with Teleflex through a quick disconnect above the engine. Remove a cotter pin, push up spring loaded assembly cover and twist to lock open. This will separate conduit, exposing cable splice thus a one minute time operation for breaking engine controls.6. Safety is built in by Teleflex components being free from jamming or contamination by foreign objects like loose tubing, dust, oil, etc. Less clearance is required for Teleflex installations since it is not subject to fouling as are other methods.

7. Quick and Accurate Rigging is accomplished through a rigging pin inserted into driving arm attached to control shaft and through to engine holding idle rig position positive. Fine adjustment is easily possible by micro adjustment and back up plate. The pylon box and quadrant have rigging pin provisions.
8. Access is simplified by routing tubing .343 O.D. for easy installation, sealing, structural modifications and inspection thus allowing best space utilization with other components and functions, this is definitely a reliability improvement.
9. Durability is accomplished by use of teflon lined conduit, it has an .030 wall inner teflon lining in a .030 wall, stainless steel conduit. It has been tested and approved above 450°F and is 97% efficient. The total number of degrees of bend and load are its limiting factors. The conduit normally survives filings, grit, freezing, oil and abuse by service crews without increasing friction. The torque on engine is 11" # max. and our installation has 212° total bend. These conditions are ideal for Teleflex. No servicing will be required for conduit cable, or torque boxes.
10. Cockpit Loads Lowered. A 4# max. handle load at 108% thrust condition will be worst condition and normally an approximate 3. # operating load with breakout load of 3.2#, assures pilot of ease in manipulation of power settings to desired position with finger motion.

NOTE: 1. The tension regulator on airplane front spar will hold this position constant through temperature changes of airplanes and wing flexing.

11. Fatigue. The torque box is an engine build up accessory and rigidly mounted. The conduit clips are located to not build up stresses due to heat growth and vibration. The pylon torque box will be mounted on primary structure. Parts are designed to 183 cps, +3.75 G and -1.50 G loads, plus 100# ult. handle loads which equals 297# ult. tension and compression on teleflex. This is only 62% of its limit load.

NOTE: Cantilevered supports off of engine build up, plus added crank arms and rods could fatigue even the best designed alternate mechanism and transmission during a long service life.

12. Past Experience: Convair is at present using teleflex on power controls as well as drag chute, emergency hydraulic valve and emergency landing gear valve without any objections. General Electric is using Teleflex on several CJ805-1 and CJ805-3 engine components and have designed from the start for the power controls to be teleflex actuated, providing mating face mountings holes and inserts for torque box attachment of power controls and fuel shutoff controls. G.E. has approved of 880 power control systems.
13. No Bob Weight will be encountered with the teleflex, but with rods .8# and cranks .3# an additional static and dynamic weight will have to oppose the +3.75 G and -1.50 G loads. Otherwise this weight could change engine setting by 5% thrust.

CONVAIR: SD

14. Handle Deflection is approximately  $\pm 1^\circ$  or  $\pm 1.22^\circ$  max. at 225% handle operating load at max. torque load in 108% thrust position or  $\pm 1.82$  including anti-creep mechanism.
15. Identical Hardware in four pods and pylons.
16. Summary: The use of Teleflex Teflon lined conduit and torque boxes in Engine Controls as equivalent or alternate to Rods and Cranks or Cables and Pulleys will satisfy all Convair Engineering Controls and Power Plant Design Groups, and General Electric Controls and Engine Requirements of:

- No weight increase
- No engine heat growth effect
- No engine shaft sideloads
- Sensitive engine control
- Quick engine change
- Safety
- Quick and accurate rigging
- Accessability
- Durability
- Low cockpit loads
- Fatigue
- Past Experience
- No bob weight
- Lower handle deflection
- Identical hardware

The most important of all requirements is a direct result of all of above factors which is, long service-free life, to give the 880 the best engine controls in the industry.

of Mock-Up review of 25, 27  
February 1957.

Reason for Change: To provide four single oil pressure indicators in  
lieu of two dual oil pressure indicators.

Description of Change:

Page 57, Paragraph 3.14.1.4 - FLIGHT ENGINEER'S INSTRUMENTS:

Change first item in instrument list as follows:

From: Four oil pressure gages (2 dual)

To: Four indicators, engine oil pressure

Page A8, APPENDIX I-C, INSTRUMENTS AND RELATED EQUIPMENT:

Change 16th item in Description List as follows:

From: "2 Dual Oil Pressure Indicator (Engine)

To: 4 Indicators, Engine Oil Pressure"

Effect on Weight Empty: Negligible  
Effect on Balance: Negligible  
Effect on Performance: None

The following not to appear in Specification language:

"Manufacturer's name and/or part number will be provided in APPENDIX I-C  
on Customer acceptance of this Change No. 77, as soon as available."

Rev. 12-10-57

3.16 ELECTRICAL SYSTEM (Cont)

- 72 3.16.8.1.7 TAXI TURN-OFF LIGHTS: Two 250-watt, white lights shall be installed in the wing leading edge, one on each side. Lights shall be directed forward at an angle of 45 degrees outboard from airplane centerline and shall share common lenses with the combination signal and auxiliary landing lights.
- 72 3.16.8.1.7.1 CONTROL: The taxi turn-off lights shall have individual control switches provided adjacent to each other.
- 3.16.8.2 INTERIOR:
- 3.16.8.2.1 PILOTS' COMPARTMENT LIGHTING: Overhead red and white light sources shall be installed to provide general pilots' compartment illumination. This illumination shall be controlled by switches on the overhead general lighting panel.
- 3.16.8.2.2 INSTRUMENT PANELS: (Lighting) Red and white instrument and cockpit lighting with separate intensity controls shall be in general conformance with Aeronautical Standard 246C, revised 12-15-54. Dimming type caps on all indicator lights shall be of all plastic construction. The intensity shall increase when the cap is rotated clockwise. Cockpit and instrument panel lighting shall be subject to cockpit mock-up approval. The white instrument panel lighting shall be connected to the emergency bus.
- 50 3.16.8.2.3 PEDESTAL AND OVERHEAD PANEL LIGHTING: Controlled red and white light sources shall be provided in the pilots' compartment for the pedestal. A separate rheostat for each panel shall be provided for controlling the overhead panel lights, and for controlling the pedestal panel lights. Rheostat controls shall be accessible to both pilot and copilot.
- 3.16.8.2.4 MAP READING LIGHTS: Individual map reading white lights, their control switches and rheostats shall be provided for the pilot and copilot.

Rev. 2-28-56

3.16 ELECTRICAL SYSTEM (Cont)

125 3.16.5.6 CONDUIT: All conduit shall be installed in accordance with Convair commercial practice as defined by Convair Specification No. 0-09001. Either metallic or nonmetallic conduit may be used. Conduit size 1/2 inch (or above) in diameter shall permit later addition of wires to terminate at unused pins on connector plugs plus two spare No. 16 wires. Later addition of these wires shall not cause the conduits to fill over 75 percent. In any case the number of active wires plus the total number of spares outlined above shall not cause the total number of wires to require excessive forces for pulling in the wires. Conduit size shall be made larger if necessary to prevent excessive wire pull-in forces in any given conduit.

3.16.5.6.1 CONDUIT LOCATION: Conduit shall be provided in the nose and main landing gear wheel wells where fluid or mechanical protection and radio interference are factors. Conduit containing essential control and indicating circuit leads shall be given special consideration in fire zone areas to obtain maximum flame resistance. The ends of conduit in wheel wells shall point downward in a manner to prevent entry of liquids into the ends of the conduit. Conduit and cables shall not unduly obstruct access doors or openings.

3.16.5.7 OPEN WIRING: Open wiring subject to engine exhaust fumes, excess heat, oil or any fluids or materials experienced during normal servicing and flight operations shall be of a type not affected thereby. Open wiring shall be installed in a manner that minimizes the effects of the wire deteriorating factors outlined above.

## INSTRUMENTS AND NAVIGATIONAL EQUIPMENT (Cont)

3.14.3.4.1  
(Cont)

preclude deviation errors resulting from improper positioning of the flux gate unit. A centered arrow pointer (lubber line), inscribed on a small metal plate, shall be provided to indicate the relationship of the flux gate to the longitudinal axis of the airplane. Flux gate mounting and environment shall be such that the units will not be subjected to vibration or shock loads to a degree which would permit deterioration under all normal operating conditions. The installation shall be designed to preclude undue deterioration of the flux gate units as a result of vibration levels to be encountered in this area under normal operating conditions.

Title: CJ-805-3 Engine Installation

Origin: General Electric Proposed

Reason for Change: To improve take-off performance.

Description of Change:

Page 10, Paragraph 3.1.1 - PERFORMANCE:

Revise paragraph to read as follows:

"The performance computations for the airplane are based on the Standard Configuration described herein, with doors and windows closed, with the General Electric CJ-805-3 engine, and in addition are based on the following:

- A. An NACA standard atmosphere except as noted.
- B. Except for take-off data, the engine data shown in General Electric curves A-4012162-502B (4-9-56), -503B (4-9-56), -504B (undated), -505B (3-3-56), -506B (3-3-56), -507B (3-3-56), -508B (3-3-56) and -510B (3-16-56) with the cruise specific-fuel-consumptions reduced by 4-1/2 percent as guaranteed by General Electric.
- C. The take-off data as shown in General Electric Engine Specification No. E-723, dated 15 March 1957.
- D. A JP -4 fuel (MIL-F-5624C) having an average net heating value of 18,650 Btu/lb.
- E. With engine data corrected for operation of cabin pressurization and air conditioning units and for installation losses excluding the effects of engine sound suppressors."

Page 10, Paragraph 3.1.1.1 - THE FOLLOWING PERFORMANCE OF THE AIRPLANE IS GUARANTEED:

Revise paragraph to read as follows:

"It shall not be acceptable to demonstrate guaranteed performance with thrust, other than take-off, in excess of engine specification values existing at the date of revision one (1) of this specification or take-off thrust in excess of those shown in General Electric Engine Specification No. E-723 dated 15 March 1957, with all thrusts reduced for installation losses excluding the effects of engine sound suppressors. Demonstrations for all guaranteed performance shall be made under existing atmospheric conditions using NACA atmospheric tables plus humidity corrections

established by CAA. All field lengths given are for level, dry, hard surface runways and zero wind conditions. Convair need not demonstrate to Buyer those performance guarantees which are included in the CAA certified data, but copies of the CAA report showing attainment of such performances shall be furnished to the Buyer."

Revise last two items on Page 11, and first item on Page 12 to read as follows:

"Take-off distance at sea level  
over 50-ft obstacle in accordance  
with CAR 4b (1.2  $V_{S1}$  used for  
take-off speed) with a weight of  
140,000 lb ..... ft.    ± 5%            4,630

Take-off distance at sea level  
over 50-ft obstacle in accordance  
with CAR 4b (1.2  $V_{S1}$  used for  
take-off speed) with a weight of  
173,500 lb at lift off ..... ft.    ± 800            7,610

Take-off distance at sea level  
over 31-ft obstacle in accordance  
with CAR 4b (1.2  $V_{S1}$  used for  
take-off speed) on a 90 degree  
F. day with weight of 160,000 lb .... ft.    ± 5%            6,820 "

Page 8, Paragraph 2.1 - APPLICABLE SPECIFICATIONS:

Last line of page, replace "General Electric Engine Specification No. E-709" with "General Electric Engine Specification No. E-723 dated 15 March 1957".

Title: Anti-Collision Light - Upper Fuselage Installation

Origin: Customer Requested - Reference: TWA Ltr. 880-79 dated  
2 February 1957

Reason for Change: To relocate the upper anti-collision light to a position on the fuselage that will permit access for maintenance. Ref.: R.F.C. 3.16.D4.

Description of Change:

Page 74, Paragraph 3.16.8.1.4 - ANTI-COLLISION LIGHTS

Change paragraph to read as follows:

The airplane shall be equipped with two anti-collision lights; one providing light for the upper hemisphere and the other for the lower hemisphere. The upper light shall be accessible from within the passenger compartment. Drainage provisions shall be made to assure fluid drainage as a result of accumulation of condensed moisture or other fluids which may become trapped. The lower light shall not be adjacent to any fuel or hydraulic fuel vent or drain line.

Exhibit to Change: (Not to appear in specification language.)

The upper light shall be removed from the fin tip and installed at the <sup>C</sup>L of the fuselage at a point approximately opposite the lower light. The light shall be accessible from within the passenger cabin area through a door in a pressure tight housing. A removable panel in the interior trim will be provided. Wiring shall be changed as required.

Title: High Pressure Oxygen Gas System, Change to

Origin: Reference: TWA TWX dated 16 September 1957 and TWA Letter No. 880-352, dated 16 October 1957

Reason for Change: Customer request for revision to CCP 44A, dated 22 March 1957

Description of Change:

Page 117, Paragraph 3.19.5.1 GENERAL:

Revise first sentence to read as follows:

"A high pressure gas type oxygen system shall be installed for use of the operating crew (pilot, copilot and flight engineer) passengers, non-operating crew (observer and cabin attendants) and in each lavatory

Paragraph 3.19.5.2 COMPONENTS:

Revise first sentence to read as follows:

"System components shall be comprised of regulators, valves, metering orifice valve, tubing, mask assemblies and three oxygen cylinder assemblies including pressure gages. Complete provisions for a fourth cylinder assembly shall be made".

Page A18, APPENDIX I-C, OXYGEN EQUIPMENT:

Delete the following items from the description list:

"1 Build-up & Vent Valve  
1 Oxygen Converter  
1 Quantity Gage  
1 Filler Valve"

Add the following items to the description list:

\* "3 High Pressure Oxygen Cylinder Assemblies (107 cu. ft.) 177 lbs  
2 Pressure Reducers  
AR Check Valve  
AR Check Valve Tee  
1 Line Valve"

\* Useful Load item

Title: Engine Starting System, Changes to

Origin: Reference: IWA Telecon of 27 November 1957 between E. L. Cannaday, W. H. Spannuth and Convair representatives.

Reason for Change: Customer request for alternate proposal on engine starting system.

Description of Change:

Page 46, Paragraph 3.12.4.4 STARTERS:

Revise paragraph to read as follows:

[ "An air turbine starter control valve shall be provided for each engine. Space provisions shall be made in No. 3 engine pod and air starting duct for the later installation of an in-line combustor. A ground air starting connection shall be installed in the fuselage forward of the front spar. A ground starting fitting shall be installed in No. 3 engine pod for ground combustor cart in-line starting of the engine. A cross-over engine bleed system shall be provided to permit starting of the other engines after the initial engine is started from the ground combustor source or from the ground air starting connection. It shall be possible under "Standard Day" conditions to start all four engines within two and one-half minutes from beginning of the first start to the time the fourth engine reaches ground idle speed. This is based on individual engine starts.

Page 55, Paragraph 3.12.12 STARTING SYSTEM:

Add the following to the end of the paragraph:

[ "An additional control switch, to be energized from an outside source, shall be provided to permit ground combustor cart starting from the cockpit. An electrical plug shall be provided at No. 3 nacelle for this purpose."

Page 64, Paragraph 3.15.2 PNEUMATIC SYSTEM, HIGH PRESSURE:

Delete the words "Not applicable" appearing after paragraph title and substitute "(Space provisions)".

Page 64, Paragraph 3.15.2.1.1 COMPRESSOR OPERATION:

Delete the words "Not applicable" appearing after paragraph title, and change paragraph title to "COMPRESSOR (Space provisions)", and add the following under the new paragraph heading:

"Space provisions shall be made in the left hand main wheel well for the later installation of a 6-8 CFM (cubic feet per minute) 3000 psi, 4-stage air compressor for supplying high pressure air for in-line starting system."

Add the following new paragraph to Page 64:

"3.15.2.1.2 AIR STORAGE BOTTLES: (Space provisions) Space provisions shall be made in the area between the air conditioning compartment and the forward cargo compartment for the later installation of two 2550-cubic inch capacity and one 900-cubic inch capacity air storage bottles."

"3.15.2.1.3 WATER SEPARATION: (Space provisions) Space provisions shall be made for the later installation of the following equipment:

- a. A ten-cubic inch mechanical separator sufficient for three hours running time of compressor.
- b. A silica gel type chemical dryer and holder.
- c. A ten-micron filter."

Change No. 31A

Title: Incorporation of Use of Solid Co-Axial Cable

Origin: Customer requested, Ref.: RFC No. 3.17-14, Item 3, Part IV of C. O. No. 1 to Detail Specification and TWA Letter 880-192 dated 24 June 1957.

Reason for Change: To reduce weight of long semi-permanent installed sections, and revision to CCP No. 31 dated 9 May 1957

Description of Change:

Page 93, Paragraph 3.17.1.3.7 - ANTENNA TRANSMISSION LINES:

Delete paragraph and substitute the following:

"All flexible antenna co-axial transmission lines shall be routed through fixed metal conduit. The conduit installation shall permit removal and replacement of any antenna co-axial line without removal or installation of cable co-axial fittings in the aircraft. The conduit shall not be used as the outer shield. Deviation from this requirement for conduit will be permitted only when the antenna co-axial line involved is wholly in the radio rack area or installed in an accessible area. Where the co-axial cable length is such as to cause difficulty in cable removal, co-axial fittings shall be installed at each end to permit replacement of a short cable-end segment most subject to wear and damage. For long transmission cable runs, aluminum-clad transmission lines of the semi-permanent, low loss type shall be installed where practical. These transmission lines shall be installed in such manner as to permit reasonable access for replacement. It shall not be necessary to remove permanent structure to gain access to these lines. Termination of these lines shall incorporate short segments of flexible cable to permit routing to the shockmounted rack and to the antenna assemblies. The junction of the flexible segments shall be located to permit easy access to the co-axial connectors for replacement of the flexible end segments."

Effect on Weight Empty: -20 pounds  
Effect on Balance: -12,000 inch-pounds  
Effect on Performance: None

Change No. 23A

Page 1 of 4

Title: Buffets, Changes to

Origin: Minutes of TWA Galley Mock-Up Reviews of 14 December 1956 and 26, 27 February 1957, TWA Letter 880-128 dated 12 April 1957 and TWA Letter 880-144, dated 13 May 1957, and verbal requests by Messers Homieir and Walker on 27 June 1957.

Reason for Change: Customer requested.

Description of Change:

Page 107, Paragraph 3.19.2.1 - BUFFET:

Revise paragraph to read as follows:

"A buffet comprised of three sections shall be provided. The two forward sections shall be 32 inches fore and aft including work surface extensions. The aft section shall be 28.25 inches fore and aft. Additional (stowable) counter space shall be provided as shown in Figure 3.19-8. The buffet installation insert retention shall be designed to the loads specified in Paragraph 3.4.4 of this specification."

Paragraph 3.19.2.1.1 - BUFFET:

Change paragraph title to: "BUFFET INSTALLATION" and revise paragraph to read as follows:

"Buffet units shall be removable for ease of maintenance and servicing. Weights of items and materials are listed in APPENDIX I-C. Any change in weight resulting from Buyer request for change over those weights listed in APPENDIX I-C shall revise the airplane empty weight guarantee."

Page 108, Paragraph 3.19.2.1.2 - BUFFET AND EQUIPMENT:

Revise paragraph to read as follows:

"The design of each of these sections of the buffet shall be such that identical functions as listed below may be provided at each section with the exception that no drinking water or coffee maker will be provided at the No. 1 (fwd) section. The sections shall be identified from forward to aft as No. 1, No. 2 and No. 3."

*** 1	Casserole Carrier @ 4 lbs ea	4
**	Standard Useful Load	
***	Added items for Alternate Load with Maximum Buffet Capacity <u>not</u> included in Weight Empty or Standard Useful Load.	

Page A14, APPENDIX I-C, FURNISHINGS:

Change 21st item "Buffet" as follows:

From: "AR"

To: "3"

Page A15, APPENDIX I-C, FURNISHINGS:

Change 17th item, "Buffet Structure" as follows:

From: "3 Buffet Structure - (2) 30-inch  
(1) 27-inch"  
(Including (2) coffee makers, drawers and storage) 503 lbs

To: "3 Buffet Sections (excluding Buyer furnished  
items noted in APPENDIX I-B)" 730 lbs

The following is not to be included in the Specification language:

"Notes on Deviation of Weights - TWA, Buffets per CCP 23A

The weight empty of 503 lbs., as changed from Specification Page A15, was the basic Specification allowance for the buffet of 217 lbs., increased by the estimated -286 lbs. noted in R.F.C. 3.19-49 and was listed in the Specification Appendix as the best estimate of that time for a final empty buffet weight.

However, since the R.F.C. was not incorporated in the Specification and the weight empty figure of 80,650 lbs. had not been modified due to a buffet change, the difference between the original basic buffet of 217 lbs. and the current empty buffet weight of 730 lbs. is the -513 lbs. shown on this CCP 23A."

## Increase -

Weight Empty:	+513 pounds
Useful Load:	- 51 pounds
Oper. Weight Empty:	+462 pounds

## Effect on Balance -

Weight Empty:	+340166 inch-pounds
Useful Load:	- 45603 inch-pounds
Oper. Weight Empty:	+294563 inch-pounds

Effect on Performance: None

Title: Water System, Single 50-Gallon Tank, Single Pump; Change to  
Origin: RFC 3.19D-10, Meeting of TWA and Convair representatives on 8  
and 10 January 1957, TWA TWX dated 23 August 1957, and Meeting  
of TWA and Convair representatives on 3, 4 and 5 February 1958.

Reason for Change: To provide increased water capacity and pressurized  
water system in lieu of gravity type; and revision to  
CCP No. 22D.

Description of Change:

Page 57, Paragraph 3.14.1.4 FLIGHT ENGINEER'S INSTRUMENTS:

Add the following items to the instrument list:

"One low water pressure warning light"

"One water pump switch (single-pole, dual throw)"

Page 108A, Paragraph 3.19.2.1.4 WATER SYSTEM:

Delete the paragraph and substitute the following:

"A pressurized potable water system shall be provided to supply the lavatory wash basins and buffets. Filters will be provided in buffets which have coffee makers or drinking water outlets. The system shall provide for draining on the ground. The tank capacity shall be 50 gallons of water with an adequate air space to act as a pressure reservoir. Means for filling on the ground at a rate of at least 10 gallons per minute shall be provided. An overflow pipe from the tank shall visually indicate at the ground service connection when the tank is full. The system shall be located and designed to prevent freezing in flight. An air pump shall be provided; and mounting and wiring provisions for a second pump shall be made. The pump assembly shall be rated for continuous duty operation.

The supply tank shall be designed to ensure that the last remaining 10 gallons in the tank will supply only the buffets.

Suitable controls shall be located on the flight engineer's panel for the operation of the water system. These controls shall consist of the following:

1. Low water pressure warning light.
2. Water pump switch (single-pole, dual throw)."

Page A-14, APPENDIX I-C, FURNISHINGS:

Change the 18th item in the Description List as follows:

From: "1 Tank Assembly, Water"

To: "1 Potable Water Tank (50-gallon capacity)"

Add the following to the bottom of the Description List:

"1 Water System Pump

And Buffet Water Filters"

Figure 3.14-3 FLIGHT ENGINEER'S PANEL:

Revise figure as required to reflect this change.

Figure 3.19-2 WATER SYSTEM SCHEMATIC:

Replace present figure in Specification with Enclosure (A).

Enclosure (A): One (1) copy of Figure 3.19-2 WATER SYSTEM SCHEMATIC  
(revised 2-17-58)

Title: Fuel System, Change from Pressure System to a Non-Pressurized System

Origin: Contractor Initiated; and Customer request for revision;  
References: FWA Letter No. 880-261, dated 7 August 1957.

Reason for Change: To improve safety and reliability of the fuel system and revision to CCP No. 21, dated 28 June 1957.

Page 47, Paragraph 3.12.9.1 - DESCRIPTION:

Insert the following between the first and second sentences:

"The wing shall incorporate four fuel tank systems of integral construction; each tank system being divided into a main and a replenishing compartment."

Page 48, Paragraph 3.12.9.1.1 - OPERATING LIMITS:

In sixth line, insert the word "initial" between "with and"fuel".

In seventh line, add "+" before "130°F".

Delete the fourth, fifth and sixth sentences, starting in the ninth line, and substitute the following:

"As an emergency condition the system shall be capable of maintaining proper engine operation at all power settings up to 25,000 feet altitude without the use of fuel booster pumps or fuel transfer pumps, with fuselage deck angles between the limits of 2° nose down to 6° nose up. As a design objective, the system shall be capable of maintaining proper engine operation at all power settings up to 35,000 feet altitudes without the use of fuel boost pumps or fuel transfer pumps, between the limits specified above."

Page 48, Paragraph 3.12.9.2 - PUMPS:

Change paragraph title to "BOOST PUMPS"

Revise first sentence to read as follows:

"Each main fuel tank shall be equipped with two ac electrically powered boost pumps."

Change second sentence to read as follows:

"Each fuel supply system to the engine shall be so arranged that failure of either boost pump shall not result in an interruption of thrust throughout all normal flight altitudes".

Delete the words "or transfer" in eighth line.

Change sixth sentence, starting in twelfth line, to read:

"Each pump and its control relay shall receive power from the same source".

Delete eighth sentence, starting in fifteenth line.

Delete the last two paragraphs on Page 48

Page 49, delete the first three sentences and related note.

Page 49, Paragraph 3.12.9.2.1 ENGINE DRIVEN FUEL PUMPS:

Change paragraph number to "3.12.9.2.2"

Add new paragraph as follows:

"3.12.9.2.1 TRANSFER PUMPS: Transfer pumps shall be located as shown in each main tank to supply the boost pump baffle areas, and in each inboard replenishing compartment to supply the corresponding main compartments. Check valves shall also be provided to bypass all transfer pumps to permit flow by gravity from the replenishing area into the main tank area and also from the main tank into the baffle areas. Separate circuit breakers shall be provided for each pump. Each pump and its control relay shall receive power from the same source. The power supply for the transfer pumps shall be diversified so that the loss of any one main bus will not result in loss of more than one transfer pump. As a design objective, 400-cycle AC control relays shall be used".

Page 49, Paragraph 3.12.9.3 - TANKS:

In the first line insert the word "compartmented" between "integral" and "fuel".

In the third line, change "3 percent" to "2 percent".

Page 49, Paragraph 3.12.9.3.1 - CROSS FEED SYSTEM:

Change last sentence to read as follows:

"The indicator lights shall be off when the valves are fully open or fully closed".

Page 50, Paragraph 3.12.9.5.1 - VENT SYSTEM OPERATING LIMITS:

In the first sentence, change limits to read as follows:

"+3.0 psi maximum and -2.0 psi minimum".

In the third sentence, add the word "initial" after "+130,F"

Page 50, Paragraph 3.12.9.7.2 LINE SHUTOFF VALVES:

Revise first sentence to read as follows:

"A shutoff valve shall be installed for each of the four tanks"

Add the following sentences to the paragraph:

"The valves shall incorporate provisions to electrically indicate in-transit positions. The indicator lights shall be off when the valves are fully open or fully closed".

Page 50, Paragraph 3.12.9.7.3 - EMERGENCY SHUTOFF VALVES:

Revise the first sentence to read as follows:

"An emergency fuel shutoff valve for each engine supply system shall be mounted above and adjacent to the horizontal firewall".

Add the following sentences to the end of paragraph:

"The valves shall incorporate provisions to electrically indicate when the valves are closed. The indicator lights shall be on when the valves are fully closed".

Page 51, Paragraph 3.12.9.8 - STRAINERS:

Delete the last sentence and substitute the following:

"An 8-10 mesh screen shall be installed at each fuel pump inlet".

Page 51, Paragraph 3.12.9.9.1 - QUANTITY GAGES:

Revise the fourth sentence, starting in eighth line, to read:

"One measurement system shall be provided for each fuel tank system with provisions to gage either main or replenishing tanks, or total."

Add the following sentence to the end of paragraph:

"The totalizing system shall derive its information from the tank system gage units and not directly from the tank capacitor units".

Page 52, Paragraph 3.12.9.9.5 - FUEL SYSTEM WARNING DEVICES:

Delete the third, fourth and fifth sentences.

Page 52, Paragraph 3.12.9.10 - DRAINAGE PROVISIONS

Change the paragraph title to "FUEL JETTISON PROVISIONS:"

Page 52, Paragraph 3.12.9.10.1 - TANK DRAIN:

Change the paragraph title to "DESCRIPTION", delete the sentence and add the following:

"A fuel jettison system shall be provided and controlled from the pilot's compartment. Each main tank shall be equipped with a hydraulic motor driven jettison pump. Standpipes shall be installed in each main tank to allow jettisoning fuel down to maximum landing weight. Provisions shall be made in each inboard main tank to jettison all inboard fuel by means of a separate control".

Page 52, Paragraph 3.12.9.10.2 - DUMP PROVISIONS:

Delete paragraph number and title

Page 52, Paragraph 3.12.9.10.3 - FUEL DUMP VALVES:

Delete the paragraph

Page 52, Paragraph 3.12.9.12 - FUEL EVAPORATION CONTROL:

Delete the paragraph

Change Paragraph 3.12.9.12.1 to read "3.12.9.12 - FUEL TEMPERATURE INDICATION".

Page 53, Paragraph 3.12.9.13.1 - UNDER-WING REFUELING:

Add the word "system" to end of first sentence and repunctuate.

Change seventh sentence, starting in eleventh line to read:

"The adapters shall be in accordance with Specification MIL-A-7898, Type A-5 or an adaptation of this type".

Page 53, Paragraph 3.12.9.13.2 - EMERGENCY REFUELING:

In the first line, change "3-1/2 inches" to "3 inches".

Add the word "system" to the end of first sentence, and repunctuate.

Add the following sentence to the end of paragraph:

"Suitable means shall be provided for connecting a ground wire from the refueling truck".

Page 53, Paragraph 3.12.9.13.3 - REFUELING CONTROLS:

Revise the first and second sentences to read as follows:

"A refueling panel shall be located in the aft section on the outboard side of each inboard pylon. The panels shall contain fuel quantity gages, pre-set quantity selectors, pre-check shut-off controls and jacks for microphone, headset, handset, panel light and panel light control switch."

Page 54, Paragraph 3.12.11.2 - GENERAL CONTROLS:

Change last item in controls list from "Fuel dump controls" to "Fuel jettison controls".

Page 57, Paragraph 3.14.1.4 - FLIGHT ENGINEER'S INSTRUMENTS:

Change quantity of third item in instrument list as follows

From: Four fuel booster pump pressure warning lights

To: Eight fuel booster pump pressure warning lights

Change fourth item in instrument list to read as follows:

"Eight fuel transfer pump pressure warning lights".

Change fifth item in instrument list to read as follows:

"Four engine fuel pressure loss indicator lights"

Page 64, Paragraph 3.15.3.1 - DESCRIPTION AND COMPONENTS:

Revise second sentence to read as follows:

"The low pressure pneumatic system shall provide wing anti-icing".

Delete the third sentence, starting on fourth line

Delete the last part of second sentence "(and fuel system pressurization)"

Page 83, Paragraph 3.16.17 - ESSENTIAL POWER, AC POWER:

Under the heading "Fuel and Oil", add the following new item:

"2. Fuel Transfer Pumps (6 of 8)"

Page 85, Paragraph 3.16.17 - ESSENTIAL POWER, DC POWER

Under the heading "Fuel and Oil", revise the list to read as follows:

- "1. Fuel Shut-off
2. Engine Pump Warning Lights
3. Boost Pump Pressure Warning Lights
4. Transfer Pump Warning Lights
5. Oil Low Pressure Warning Lights
6. Booster Pump Relays (4)
7. Transfer Pump Relays (4)

## Page A24, APPENDIX I-D COMPONENT REMOVAL AND REPLACEMENT TIME:

Delete the following items from the list:

Fifteenth item: "Fuel Pressurization Valve"  
Twentieth item: "Fuel Tanks Pressure Regulator"  
Thirty-fifth item: "Bleed Air Heat Exchanger"

Add the following new item to the above list as follows:

<u>Replacement Item</u>	<u>No. Men</u>	<u>Manhours</u>	<u>Elapsed Time</u>
Fuel Transfer Pumps	1	1.0	1.0

Revise the following Figures to reflect the above changes:

Figures: 3.12-1 Engine Starting System  
3.12-2 Schematic; Engine Fuel Supply, Subsystem  
3.12-3 Schematic, Fuel Tank Vent, Subsystem  
3.12-4 Schematic, Fuel Jettison, Subsystem

Add 3.12-5 Schematic, Fuel - Defuel Subsystem

Enclosures: (A) Four (4) copies Figure 3.12-1  
(B) Four (4) copies Figure 3.12-2  
(C) Four (4) copies Figure 3.12-3  
(D) Four (4) copies Figure 3.12-4  
(E) Four (4) copies Figure 3.12-5

In fourth line, change the following:From: 17 feet 7 inchesTo: 19 feet 5 inchesIn seventh and eighth lines, change the following:From: 81 feet 7 inchesTo: 82 feet 10 inches

## Pages 38 through 41, Paragraph 3.10, SURFACE CONTROL SYSTEM:

Revise the following subparagraphs to read as follows:

"3.10.1.2 AILERON SYSTEM: Ailerons and spoilers shall be used for lateral control. The ailerons shall be manually controlled by a separate cable system from each wheel and a separate cable system in each wing connecting to the aileron flight tab. The ailerons shall be interconnected by push pull tubes. The spoilers shall be hydraulically operated and shall be used at all speeds for lateral control as well as speed brakes. The spoiler system shall have two independent hydraulic power systems. Lateral trim shall be accomplished by an irreversible trim tab located on each aileron and operated by a control wheel in the flight deck.

3.10.1.3 RUDDER SYSTEM: The rudder shall be manually controlled by sets of rudder pedals provided for the

pilot and copilot. A cable and push pull tube system shall interconnect the rudder and a spring tab on the rudder. Each set of rudder pedals shall be adjustable fore and aft, to accommodate pilots of different stature. Trim control shall be accomplished by an irreversible trim tab operated by a control wheel on the pedestal.

3.10.1.4

**ELEVATOR SYSTEM:** The elevator shall be manually controlled by wheel type control columns for the pilot and copilot. A cable push pull tube system shall interconnect the control columns and operate spring tabs on each elevator.

3.10.1.4.1

**GUST LOCKS:** Change title to "GUST PROTECTION" and

Revise paragraph as follows:

Hydraulic dampers shall be installed at each aileron, elevator and the rudder surfaces to prevent structural damage due to gusts. The dampers shall not adversely affect normal control forces in flight.

3.10.1.5

**STABILIZER SYSTEM:** The stabilizer shall be controllable to provide longitudinal trim. Movement shall be accomplished by hydraulic power (with a standby mechanical system). A red warning light will indicate an incorrect stabilizer setting for takeoff whenever the airplane is on the ground.

3.10.2.1

**LIFT AND DRAG INCREASING DEVICE SYSTEMS:**

"The flaps shall be operated by a hydraulic motor driven gear box, located in the fuselage, powered by both hydraulic systems. Torque tubes shall connect the gear box to mechanical actuators at each flap section. The system shall be irreversible to prevent flap motion from airloads. The flaps shall be controlled by a lever on the pilots' pedestal. Flap position indication shall be provided. Full flap deflection shall be obtainable from either hydraulic system. A monitoring system shall be provided to prevent asymmetrical flap positioning in the event of mechanical failure.

at very low  
air speed

- 3.10.5 YAW DAMPER: A yaw damper shall be provided to improve riding qualities and handling characteristics of the basic airplane. The airplane shall be basically stable (nondivergent) under all normal flight conditions with the yaw damper inoperative. The yaw damper shall be designed so that it will fail safe and shall not induce unsafe loads in the event of malfunctioning.

Title: Hydraulic System, Changes to

Origin: Letter of Agreement No. 26 of Purchase Agreement and TWA Letter  
Nos. 880-99 dated 12 March 1957, 880-323 dated 20 September 1957  
and 880-363 dated 25 October 1957.

Reason for Change: To change requirements of four hydraulic reservoirs to  
two reservoirs and to provide individual fluid quantity  
indication for each hydraulic system; and revision to  
CCP No. 3.

Description of Change:

Page 57, Paragraph 3.14.1.4 FLIGHT ENGINEER'S INSTRUMENTS:

Add the following item to the instrument list:

"One remote quantity gage, hydraulic reservoir (dual)"

Page 63, Paragraph 3.15.1.7 RESERVOIRS:

Delete the paragraph and substitute the following:

"Two hydraulic reservoirs, interconnected at approximately the refill level, shall be installed aft of the main wheel well area to supply the systems. The interconnection of the reservoirs provides for common filling and common level indication. The installation of the reservoir shall be such that the tanks may be filled by maintenance personnel at ground working level. A dual, remote reading quantity gage shall be installed on the flight engineer's panel to indicate the fluid level of each reservoir system. Each hydraulic system reservoir shall be provided with a transmitter, and a two-channel amplifier installed in the electrical compartment, to actuate the dual quantity gage. One sight gage shall be installed in the system No. 1 reservoir and shall be accessible for daily preflight checks, and for routine maintenance use."

Page A8, APPENDIX I-C, INSTRUMENTS AND RELATED EQUIPMENTS:

Change the 17th item in Description List as follows:

From: "A1 Hydraulic Fluid Quantity"

To: "1 Hydraulic Fluid Quantity Gage (Dual)"
